

Important information

Getswish AB is changing its technical partner, which means changes in our URL for Swish API and a new Swish Certificate.

You will therefore need to connect to our new API and download our new Swish Certificate in order for the Swish service to work after June 29, 2018. Please note that it is important that these changes are made at the same time in order for them to work.

You will need to

1. Change the URL:s to Swish (for both payment requests and refunds). This also includes the API for QR Codes.
2. Download a new Swish Certificate.

You can now do these changes from our new [Swish Certificate Management](#). Please note that the new address is comcert.getswish.net.

[Here](#) you will find information on how to update the API for Swish for Merchants. [Here](#) you will find information on how to update the API for Swish QR Codes.

We recommend that you make these changes as soon as possible.

If you have any questions, please contact us at tekniksupport@getswish.se.

In case you need to open your system's firewall for receiving callbacks, you should add the new callback IP address 213.132.115.94 for incoming traffic to your firewall rules as soon as possible, but no later than June 29:th 2018. The old IP address, i.e. 194.242.111.220 from which callbacks from Swish are currently coming from, should also remain opened for incoming traffic until June 29:th 2018. After June 30:th the old IP address (i.e. 194.242.111.220) can safely be removed from your firewall rules.
